                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       01-MAR-2000 (first entry)
This sequence is a Moraxella catarrhalis BASB019 protein of the invention. The sequences can be used for diagnosis of disease, staging of disease, or determining response of an infectious organism to drugs. The polynucleotides may be used as a source for hybridisation probes, and for screening of genetic mutations, serotype, organism or strain case, and as identification, identification of mutation in BASB013 sequences, and as components of arrays which are useful for diagnostic and prognostic components of arrays which are useful for diagnostic and prognostic purposes. The polypeptides can be used to produce antibodies, and as a target for the screening of antimicrobial drugs. The polypeptides can be used in vaccine formulations, and to identify agonists and antagonists. The polypeptides, antibodies, agonists and antagonists. The polypeptides can be used for the treatment and prevention of (which are bacteristatic) are used for the treatment and prevention of diseases including bacterial infection, otitis media in infants and

They are also used in the prevention of adhesion of bacteria infection. They are also used in the prevention of adhesion of bacteria to eukaryotic matrix proteins on in-dwelling devices, or to extracellular proteins on wounds, and to thus prevent tissue damage and/or block the proteins on wounds, and to thus prevent tissue damage and/or block the proteins on wounds, and to thus prevent tissue damage and/or block the proteins on of pathogenesis in infections initiated other than by normal progression of pathogenesis in infections has risen dramatically. The frequency of Moraxella catarrhalis infections has risen dramatically, and it is no longer common to isolate M. catarrhalis strains that are and it is no longer common to isolate M. catarrhalis strains that are can be used screen for new antibacterial compounds that may target these resistant to standard antibotics. The BASBO19 products of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC components of arrays which are useful for diagnostic and prognostic CC purposes. The polypeptides can be used to produce antibodies, and as a CC target for the screening of antimicrobial drugs. The polypeptides can CC also be used in vaccine formulations, and to identify agonists and CC (which are bacteristatic) are used for the treatment and prevention of CC diseases including bacterial infection, otitis media in infants and CC (which are bacteristatic) are used for the treatment and prevention of CC diseases including bacterial infection, otitis media in infants and CC (which are bacteristatic) are used for the treatment and prevention of CC diseases including bacterial infection, otitis media in infants and CC (which are bacteristatic) are used for the treatment and prevention of CC (invasive diseases, chronic otitis media with hearing loss, fluid CC (invasive diseases, chronic otitis media with hearing loss, fluid CC (invasive diseases, chronic otitis media with hearing loss, fluid CC (invasive diseases), in faction the upper respiratory tract and middle ear common the proteins on in-dwelling devices, or to extracellular CC (interest of the upper respiratory tract and middle ear (interest) and to thus prevent tissue damage and/or block the CC (interest of the upper line of the upper common to isolate M. Catarrhalis strains that are cc and it is no longer common to isolate M. Catarrhalis strains that are cc can be used screen for new antibacterial commonneds that may target these cc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

The polypeptides can be used to produce antibodies, and to identify polypeptides can also be used in vaccine formulations, and to identify polypeptides can also be used in vaccine formulations, and to identify agonists and antagonists. The polypeptides, antibodies, agonists and approperties and antagonists of including bacterial infection, otitis media in prevention of diseases including bacterial infection, otitis media in finetions and invasive diseases, chronic otitis media with hearing loss, infections and invasive diseases, chronic otitis media with hearing loss, infections and invasive diseases, chronic otitis media with hearing fluid accumulation in the middle ear, additive nerve damage, delayed the four contraction of the middle ear, additive nerve damage, delayed the four contraction of the middle ear.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      03-MAY-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               11-NOV-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Moraxella catarrhalis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence is a fragment of a Moraxella catarrhalis BASBO19 protein of the invention. The sequences can be used for diagnosis of disease, or determining response of an infectious organism to staging of disease, or determining response of an infectious organism to drugs. The polynucleotides may be used as a source for hybridisation probes, and for screening of genetic mutations, serotype, organism or probes, and for screening of genetic mutations, serotype, organism or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel BASB019 polynucleotides and polypeptides from Moraxella catarrhalis used to prepare vaccines against bacterial infections

The polypeptides, antibodies, agonists and antagonists (which are bacteristatic) are used for the treatment and prevention of diseases including bacterial infection, othits media in infants and children, pneumonia in the elderly, sinusitis, nosocomial infections and invasive diseases, chronic othits media with hearing loss, fluid accumulation in the middle ear, auditive nerve damage, delayed speech learning, infection of the upper respiratory tract and middle ear infection. They are also used in the prevention of adhesion of bacteria to eukaryotic matrix proteins on in-dwelling devices, or to extracellular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Moraxella catarrhalis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   upper respiratory tract infection; middle ear infection; therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       03-MAY-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         and as components of arrays which are useful for diagnostic and prognostic purposes. The polypeptides can be used to produce antibodies, and as a target for the screening of antimicrobial drugs. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2000-062148/05
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               11-NOV-1999
                                                                                                                                                                                                       proteins on wounds, and to thus prevent tissue damage and/or block the normal progression of pathogenesis in infections initiated other than by the implantation of in-dwelling devices or by other surgical techniques. The frequency of Moraxella catarrhalis infections has risen dramatically, and it is no longer common to isolate M. catarrhalis strains that are resistant to standard antibiotics. The BASB019 products of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           probes, and for screening of genetic mutations, serotype, organism or strain identification, identification of mutation in BASB013 sequences,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                staging of disease, or determining response of an infectious organism drugs. The polynucleotides may be used as a source for hybridisation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example 8; Page 70; 101pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a peptide specific for a BASB020 CC protein, isolated from Moraxella catarrhalis, used in an example from CC the present invention. BASB020 polynucleotide fragments may be used as CC hybridisation probes for RNA. CDNA and genomic DNA to isolate full-length CC clones and genomic clones encoding BASB020 and to isolate cDNA and genomic Clones of other genes that have high sequence identity to BASB020 gene. CC The BASB020 polynucleotides and polypeptides are used as research compared to conduct efficient screening of genetic mutations. CC constructed to conduct efficient screening of genetic mutations. CC sequences can be used in the discovery of the distribution. The polynucleotide sequences can be used in the discovery and development of antibacterial compounds. The polypeptides and polynucleotides are used to block the initial physical interaction between a gram negative and/or gram positive bacteria to the mammalian host. The polynucleotides encoding certain compounds of bacterial cell surface protein are used to polynucleotide constructs which are useful for genetic immunisation conjuncted against BASB020 can be used for treating an antibody confidence and polynucleotide sequences. A therapeutic composition comprising an antibody confidence affected against BASB020 can be used for treating humans with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventiuseful in developmental biology and in elucidating cell signalling a cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL101840-ABL16175) and the encoded proteins (ABB7377-ABB72072).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to isolated polynucleotide (I) and CC polymerase (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinate control of the contr

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II), (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical
                                                                                                                                                                                                                                                                                                                                               Claim 20; SEQ ID No 41443; 103pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ABG11084;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elicidating cell signalling and chell-cell interactions in higher eukaryotes for the development of discusses, therapeutics and pharmaceutical drugs. The invention discusses genomic DNA sequences (ABL16176-ABL30511), expressed DNA (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel human diagnostic protein #11075
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      18-FEB-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and animo acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisseria bacteria, or to raise antibodies. They may also be used to screen for agonists or antagonists, which may themselves have use as antibacterial agents. The polynucleotides of the invention may also be used in gene therapy protocols.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ABB67264;
                                                                                                                                                                                                                                             capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL101840-ABL16175) and the encoded proteins

                                                                        Matches
                                                                                                       Query Match
                                                                                                                                                                 isolated regulatory element from the nucleic acid sequences and a plant cell or seed transformed with the nucleic acid. An isolated regulatory element from these nucleotide molecules is useful for expressing an exogenous gene in plant cells. The nucleotide sequences of the invention and vectors containing these sequences are useful for expressing an injustive trait loci (QTL) tagging, QTL mapping, DNA fingerprinting and in marker assisted selection, in forage and turf grass improvement, palatability, regrowth after cutting and grazing, cold tolerance, tiller survival and plant persistence. The present sequence represents the perennial ryegrass 4-coumarate Co-A-ligase 1 (LP4CL1) protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                 This invention represents purified or isolated nucleic acid and protein sequences of enzymes involved in lignin biosynthesis. The enzymes of the invention are 4 coumarate CoA-ligase (4CL), cinnamoyl-CoA reductase (CCR) and cinnamyl alcohol dehydrogenase (CAD) from a ryegrass (Lollum sp.) or fescue (Festuca sp.). The invention comprises an (Lollum sp.) or fescue (Festuca sp.) and cinnamyl alcohol dehydrogenase (CAD) from a ryegrass (Lollum sp.) or fescue (Festuca sp.).
                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 13; Fig 2; 148pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel nucleic acid encoding enzymes involved in lignin biosynthetic pathway from ryegrass or fescue species useful for modifying lignin biosynthesis in plants and as a molecular genetic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Perennial ryegrass; lignin; 4 coumarate COA-ligase; QTL; lignin biosynthesis; enzyme; cinnamoyl-COA reductase; CCR; cinnamyl alcohol dehydrogenase; CAD; molecular genetic marker; qualitative trait loci; tagging; QTL mapping; DNA fingerprinting; marker assisted selection; forage improvement; turf grass improvement; dry matter digestibility; herbage quality; palatability; regrowth; cold tolerance; drought tolerance; tiller survival; plant persistence.

The inventueseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLG175-ABL30511), expressed DNA sequences (ABLG1840-ABL16175) and the encoded proteins (ABB73737-ABB73072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             pharmaceutical.

                    This invention relates to novel nucleic acid and protein sequences of mutant acetohydroxyacid synthase (AHS) enzymes that can be used to create herbicide resistance green plants. The encoded AHAS exhibits resistance to at least one herbicide as compared to the wild-type, and has a serine-asparagine substitution at amino acid 627. The sequences of

                                                                                                                       mutant acetohydroxyacid synthase (AHS) enzymes that can be used to create herbicide resistance green plants. The encoded AHAS exhibits resistance to at least one herbicide as compared to the wild type, and has a serine-asparagine substitution at amino acid 627. The sequences of the invention are useful creating herbicide resistance plants, by planting these plants it is easier to control the growth of weeds in the vicinity of a plant by applying a herbicide which normally inhibits AHAS. The sequences can be used for producing rice plants having resistance to at least one herbicide which normally inhibits AHAS in the wild-type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                vicinity of a plant by applying a herbicide which normally inhibits AHAS. The sequences can be used for producing rice plants having resistance to at least one herbicide which normally inhibits AHAS in the wild-type plant, such herbicides may be particularly inidazolinone or sulphonylurea herbicides. The production of plant having resistance to AHAS inhibiting herbicide allows the development of new herbicides which target AHAS, reducing the risk of weeds becoming resistant. The present sequence represents the wild type protein sequence of the rice AHS.
                           plant, such herbicides may be particularly imidazolinone or sulphonylurea herbicides. The production of plant having resistance to AHAS inhibiting herbicide allows the development of new herbicides which target AHAS, reducing the risk of weeds becoming resistant. The present
                                                                                                                                                                                                                                                                                                                                                                  This invention relates to novel nucleic acid and protein sequences

                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL101676-ABL30511), expressed DNA sequences (ABL101840-ABL16175) and the encoded proteins (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                               The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL0.1840-ABL16175), and the encoded proteins

```

The invention relates

to an isolated nucleic acid detection reagent

ligand and a TCR was studied using purified MHC-single peptide complexes (e.g. AAW04633-37) and an antigen specific TCR-zeta chimeric receptor expressed on the surface of a basophil cell line. AAT43774-77 are primer

Disclosure; SEQ ID NO 16689; 21pp + Sequence Listing;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                       Novel specific inhibitors of the interaction between a T-cell receptor (TCR) and a MHC peptide ligand, are identified by: (a) incubating responder cells that express TCR with a MHC ligand which stimulates the cells, and a test cpd.; (b) monitoring a signal produced by the cell when the TCR and MHC peptide ligand interact; and (c) comparing this signal with a control signal from a similar system lacking the test cpd. The specific inhibitors are potentially useful for blocking T-cells that cause autoimmune diseases (e.g. diabetes, rheumatoid arthritis, Grave's disease etc.), organ transplant rejection or other T cell mediated conditions. The interaction between a specific MHC peptide
                                                                                                                                                                                                                                                                  Specific inhibitors of interaction between T cell receptor and MHC peptide ligand - identified by incubating receptor expressing cells with ligand and test cpd., and measuring change in interaction to detect cpds. potentially useful for blocking disease related T cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                primer; PCR; polymerase chain reaction; specific inhibitor; T-cell receptor; TCR; MHC; ligand; autoimmune diseas; diabetes; rheumatoid arthritis; Grave's disease; organ transplant rejection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

(i.e. AAR84018-47) covalently linked to 1-3 hapten mols. can be used for treating contact sensitivity, or desensitising a mammal to a contact allergen (e.g. urushiol of poison ivy/oak). The peptide-hapten cpds. disrupt the normal proliferation of hapten-specific T cells, or alter the T cell mediated delayed type hypersensitivity response to the hapten, resulting if offering a property of the sense of the

                                                                                                                                        CC anchoring protein 79 (AKAP79). AKAP79 (see AAM05264 for wild type CC residues 37-50) is responsible for anchoring cAMP-dependent protein kinase CC (PKA) to specific intracellular sites. AKAP79 is predominantly present CC in postsynaptic densities in the human forebrain. The pathways that CC involve AKAP79 are important in many cell types and have been implicated in many cell functions, including the transcriptional activation of the cC interleukin 2 gene that is important in T-cell activation. AKAP allso binds to calcineurin (see AAW02536), which is a calcium/calmodulin CC dependent protein phosphatase associated with T-cell activation. By binding both pKA and calcineurin, AKAP79 co-localises a kinase and CC phosphatase which may regulate flux through a specific signalling CC pathway. The AKAP79 binding sequences can be used to develop products for use in the treatment of autoimmune related conditions. The AKAP79 binding squences can be used to develop products of use in the treatment of autoimmune related conditions. The AKAP79 cc-localises a kinase and for stimulating activated T-cells for selected clonal CC expansion. The proteins can also be used in a method for enhancing CC in T-cell biology and activation of the immune response.

                                         and calcineurin and so colocalises a kinase and a phosphatase that may regulate flux through a specific signalling pathway. Calcineurin is a Ca2+/calmodulin-dependent protein phosphatase which is involved in many intracellular signalling pathways. It participates in regulation of IL-2 expression following T cell stimulation in T cells. Calcineurin-binding peptides derived from AKAP 79 may be used to inhibit calcineurin activity in a cell. The peptides are useful for treating graft rejection following organ transplantation and for treating T cell-mediated disorders. Calcineurin deletion mutants which bind AKAP 79 are useful for defining an AKAP 79 binding site, for stimulating the immune response, stimulating activated T cells for selected clonal expansion, or for enhancing T cell responses to experimental stimuli for evaluation of early events in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            23-NOV-1994;

                                                                                                                                                                                                                                                           The present sequence is a mutant peptide derived from A-kinase anchor protein 79 (AKAP 79). It is expressed as a poly-histidine tag fusion protein and can thus be purified to homogeneity by nickel affinity chromatography. AKAP 79 binds both cAMP-dependent protein kinase (PKA)

(i.e. AAR84018-47) covalently linked to 1-3 hapten mols. can be used for treating contact sensitivity, or desensitising a mammal to a contact allergen (e.g. urushiol of poison ivy/oak). The peptide-hapten cpds. disrupt the normal proliferation of hapten-specific T cells, or alter the T cell mediated delayed-type hypersensitivity response to the hapten, resulting in effective desensitisation to the hapten.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a peptide encoded by a single exon nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New spatially-addressable set of single exon nucleic acid probes, useful for measuring gene expression in sample derived from human breast, comprises number of single exon nucleic acid probes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         09-AUG-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                           Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a spatially-addressable set of single
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 27; SEQ ID NO 10910; 327pp + sequence listing; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                 fetal liver. The present sequence is a peptide encoded by a succleic acid probe of the invention.

Note: The sequence data for this patent did not form part of printed specification, but was obtained in electronic format from WIFO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exor

                                                                                                                The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a

                                                                                                                                                                                           The present invention relates to single exon nucleic acid probes (SENP: see AA131315-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of

```
CC nucleid acid expressed in the human lung; measuring gene expression in a CC sample derived from human lung; comprising (a) contacting the array with CC a collection of detectably labeled nucleic acids derived from human lung; comprising (a) contacting the array with CC mRNA, and (b) measuring the label detectably bound to each probe of CC the array; identifying exons in a eukaryotic genome, comprising CC (a) algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridisation of detectably CC labeled nucleic acids from eukaryote lung mRNA, to a single exon probe, comprising (a) identifying exons from genomic sequences of the above mentioned microarray; assigning exons to a single exon probe, comprising (a) identifying exons from genomic sequence by the method comprising (a) identifying exons from genomic sequence by the method comprising (a) identifying exons from genomic sequence by the method comprising the expression of each of the exons in several common pattern of compression of the exons in the tissues and/or cell types indicates that the exons should be assigned to a single gene; a peptide comprising one concession analysis, and for identifying exons in a gene, particularly cusing human lung derived mRNA and for the study of lung disease (COPD), interstitial lung disease (ILD), familial idiopathic pulmonary disease concession, neutrofibromatosis, thebrous sclerosis, Canther's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           30-JUN-2000;
